

**Name:** *Reduced leaf blade (Rlb)*

**Accessions:** LS9

**Gene ID:**

**Map position:** chromosome 7

**Gene function:**

**Gene effect:**

**Phenotypes:** MT-*Rlb* presents reduced leaf blade.

**Description of accessions available:** MT-*Rlb* is a BC6Fn introgressed from LA716 (*S. pennellii*)

**Comments:** *Rlb* seems to be the major natural genetic variation responsible for the small plant size of wild *Solanum* species when compared to the cultivate tomato.
