

Name: *bushy (bu)*

Accessions: Br4

Gene ID:

Map position: chromosome 8 (long arm)

Gene function:

Gene effect: the known mutated allele probably reduces cell expansion or division.

Phenotypes: MT-*bu* presents internodes very short, resulting in dwarfing plants; all parts of inflorescence foreshortened.

Comments:

Description of accessions available: MT-*bu* is a BC6Fn introgressed from LA1666.

Figures:

Left photo: MT-*bu* (left) showing reduced size due to its short internods. Right photo: MT-*bu* plant with compact pedicels producing almost sessile fruits.
